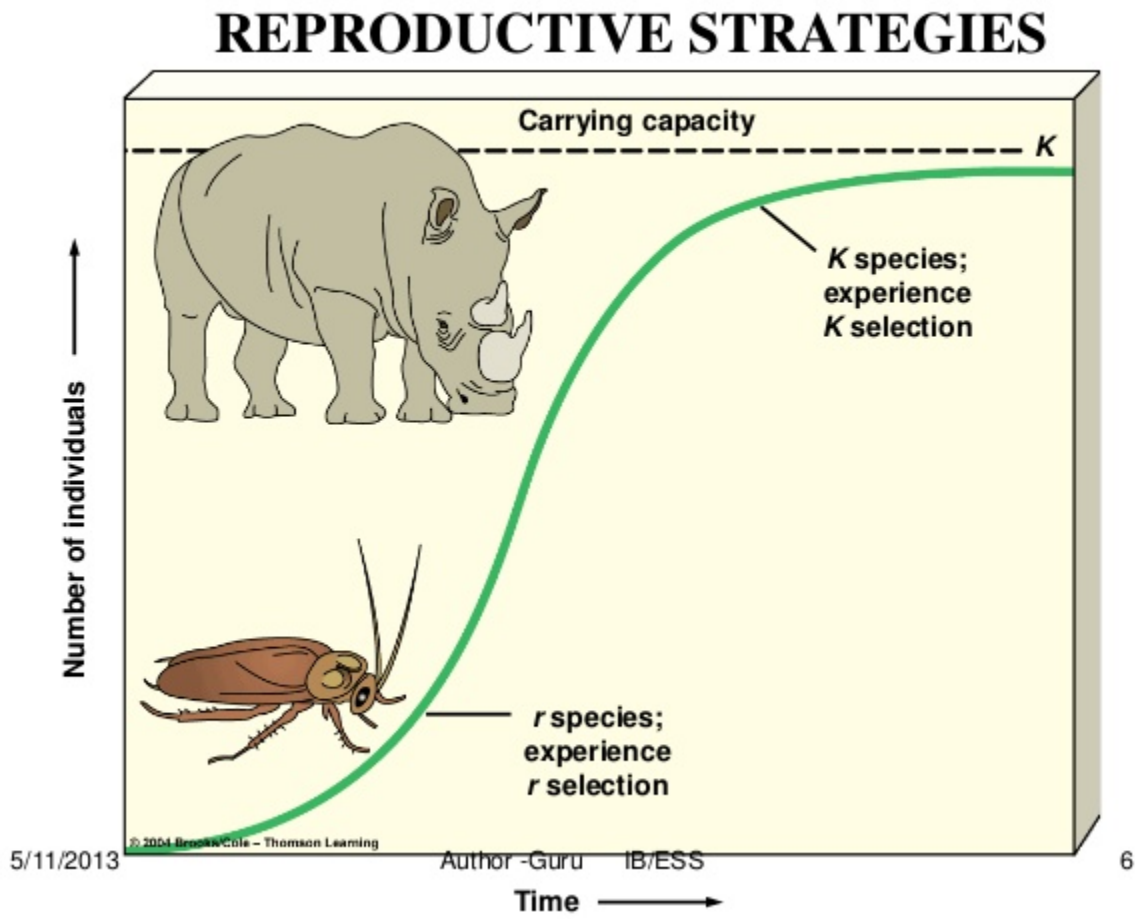
K Strategists versus r Strategists – The Evolution Behind Racial Fertility and Family

tonyodarg.wordpress.com/2020/12/29/k-r-strategists

Tony Odarg December 29, 2020



Much ado has been made by conservatives about the demise of the black family. Of course, as the left will no doubt point out, the right is judging blacks for their failures, without regard for slavery or Jim Crow. Then the right retorts that the dems are the real racists, with a history of the bigotry of low expectations. All of this misses the mark, as the left is more correct than they know. The nuclear family as we understand it is an invention of White people, as well as an aberration in the history of the White family. Most White families consisted of some form of intergenerational living coupled with above replacement level fertility. As anyone who has a large family, it makes for quite the fun. But there is as with most things an evolutionary aspect to the reason why Whites have been incredible successful historically at creating solid family formation, whereas blacks have not.

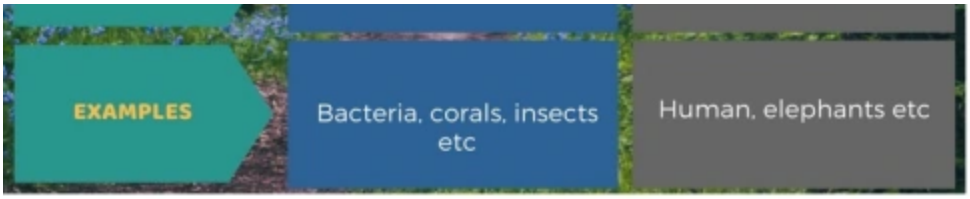
> The key difference between r strategist and K strategist is that the r strategist lives in unstable and unpredictable environments while the K strategist lives in more stable environment. Because of these environmental conditions, the r strategists produce many offspring while the K strategists produce few offsprings.

Based off of this assessment, you can guess who is who. Whites are K strategists, who evolved in stable ecologies and so produced few offspring with high investment compared to their r strategist counterparts; blacks are r strategists, who evolved in unstable ecologies and produce many offspring with low investment as compared to Whites. What this means in non-science speak is that Whites are less interested in having lots of kids with several partners, and more concerned with having a manageable amount under one roof with one partner. They then create stable societies in which to invest as much as possible into their children, in terms of health, housing, education, nurture, socialization and recreation.

r Strategist vs K Strategist

More Information Online WWW.DIFFERENCEBETWEEN.COM

	r Strategist	K Strategist
DEFINITION	Organisms living in unstable environments. Hence they undergo rapid reproduction to stabilize themselves.	Organisms living in stable environments. Hence they are high in population and do not need to undergo rapid reproduction.
STABILITY OF THE HABITAT	Live in less stable environments.	Live in very stable environments.
ENVIRONMENTAL CONDITIONS	Non – predictable	Predictable
LIFESPAN	Short lifespan	Long lifespan
SIZE	Small in size	Larger in size
REPRODUCTIVE RATE	Very fast	Slow
NUMBER OF OFFSPRING PRODUCED	Many	Few
MATURITY RATE	Early maturation of the organism	Late maturation of the organism
PROBABILITY OF SURVIVAL	Less	High
MORTALITY RATE	High	Low
PREDATION	Subject to predation easily.	Not subjected to predation easily



Blacks on the other hand are fine with having many kids with multiple different partners. They create therefore societies in which it is impossible to manage these offspring or to train and raise them with much guidance. Their interest is more in making sure that they breed as much as possible, if the understanding that doing so in a violent, undeveloped society will give some of their offspring the ability to survive in order to in turn pass down their genes.

Blacks evolved in an ecology which is not given to planning for the future, Whites on the other hand evolved to do the exact opposite. This is one of many reasons why denying the science of evolution is so dangerous, and why Blank Slate Theory is untenable. If you understand that certain races evolved to behave a certain way because of the ecology they evolved in, no one should be surprised that creating a diaspora in artificial conditions, that is without Darwinian natural selection pressures, will not work. Those Darwinian natural selection pressures no longer exist in the developed world because of the discovery of fossil fuels and the collapse of child mortality due to medical advances. Blacks are at a different stage in the evolutionary process which Whites surpassed long ago. The solution to racial conflict in heterogeneous societies is not simply separation, but to eliminate the non-White diasporas in the West through mass emigration back to their native homelands.
